FOREWORD

The **Institutional Research Council, Inc.** is a nonprofit membership association of institutional consumers of supplies and materials. It was jointly organized by the American Hotel & Motel Association (formerly American Hotel Association), the American Library Association, the American Motor Hotel Association, The Hospital Bureau, Inc. and the National Executive Housekeepers Association, Inc. Its current membership now includes the American Hospital Association, the American Hotel & Motel Association, the American Library Association, the American Motor Hotel Association, the American Osteopathic Hospital Association, the Association of College Unions, the Association of School Business Officials of the United States and Canada, the Catholic Hospital Association of the United States and Canada, the Hospital Bureau, Inc., the Medical Group Management Association, the National Association of Hospital Purchasing Agents and the YMCA National Board. Application for membership may be made by any person, firm, corporation or government agency which is a consumer of supplies and materials in connection with the operation of institutional, governmental, public feeding, or public housekeeping facilities.

The objectives of the Institutional Research Council, Inc. include a coordinated research program, the development of product standards and the sponsorship of the Certified Products Program. The Council also serves as a clearing house for the results of research conducted by its individual members and to select and sponsor research projects of mutual interest.

The Institutional Research Council, Inc. has two basic types of research programs underway. The older program establishes performance standards for various classes of products consumed by Institutions. This program defines the yardstick against which the products are measured to determine whether they qualify for listing in the **Certified Products List.** The newer research program involves the development of information which may be of direct use itself, or may lead to further work which will result in performance standards for a class of products.

It is anticipated that 1965 will see the completion of two major studies under the sponsorship of the Institutional Research Council. One study evaluates the effect on carpet life of various types of carpet underlays, and in addition, suggests appropriate specifications for carpet underlays according to the areas of traffic density.

A second study (being conducted at the Cornell Hotel School Research Center) evaluates the several areas of institutional buildings to identify the qualities of walls and wall coverings which would appropriately be installed in each area. This project is being done with a view to establishing performance standards for institutional walls and wall coverings.

Each year the members of the Institutional Research Council exchange, without charge, a copy of the results of their own sponsored research with other Council members in order that a research effort will not be duplicated among organizations. Most of the publications which have been exchanged in the past have been fairly expensive items which would not otherwise be available on a free basis. Examples are:

The Care, Cleaning and Selection of Floors and Resilient Floor Coverings, Ahrens Book Company, 116 West 14th St., New York 11, N. Y. $2.00. Prepared under the direction of the American Hotel & Motel Association.

Photocopying from Bound Volumes: A Study of Machines, Methods and Materials, Library Technology Project-American Library Association, 50 East Huron St., Chicago 11, Ill. $5.00. Supplement #1—$2.00. Supplement #2—$2.00. Supplement #3—$5.00.

The Selection and Maintenance of Commercial Carpets, The Cornell Hotel and Restaurant Administration Quarterly, Ithaca, N. Y. $2.00. Prepared under the direction of the American Hotel & Motel Association.

The Selection, Care and Laundering of Institutional Textiles, The Cornell Hotel and Restaurant Administration Quarterly, Ithaca, N. Y. $2.00. Prepared by L. A. Bradley, Laundry and Textile Consultant to the American Hotel & Motel Association.

Casters for Carpeting. Library Technology Project. American Library Association, 50 East Huron St., Chicago 11, Ill. No charge.

Protecting the Library and Its Resources. Report on a study conducted by Gage-Babcock & Associates, Inc., Library Technology Project, American Library Association, 50 East Huron St., Chicago 11, Ill. $6.00.

Asphalt Paving for Parking Areas, Driveways and Walkways. A report on Their Construction, Maintenance and Layout, the Cornell Hotel & Restaurant Administration Quarterly, Statler Hall, Ithaca, N. Y. $2.00. Prepared by Charles T. McGavin, Parking Consultant to the American Hotel & Motel Association.

The **Certified Products List** has been distributed by Council members to members of their respective organizations since the inception of the Council in 1961. In addition, copies are made available by the Council to the general public. Under the Council program manufacturers with products designed for the institutional market can elect to meet only one widely accepted set of requirements, rather than having to seek approval repeatedly of their products from a number of different organizations.

The Council periodically prepares a "Workbook of Test Methods and Standards for the Certified Products Program" which sets forth the standards used by the Council. These are similar to or based on existing standards published by The American Society for Testing Materials, The American Standards Association, the United States Government and similar organizations. In the case of textiles the standards of the American Standards Association have been adopted by the Council.

No attempt is made to differentiate between those products which barely meet the minimum standards and those products which far exceed the standards; thus, it is not the purpose of the List to eliminate the responsibility of the purchasing agent to select the products most appropriate for his institution.

For discussion of the specific classes of products please refer to pages 6, 26, and 45.

Part I

CLEANING AND MAINTENANCE PRODUCTS

The products submitted under this program have been tested by Foster D. Snell, Inc. and those listed in Part I include only the ones which they found to meet the standards. For each product listed there is an affidavit by the manufacturer on file with Foster D. Snell, Inc. certifying that the sample tested is representative of the product as sold to institutions and that it was selected at random from stock.

Products are listed alphabetically by trade name. They are not rated on a comparative basis, as they were checked only for their ability to meet the established performance standards.

This list is not intended to be a substitute for intelligent selection or use of any product. The user is cautioned to read carefully all label copy furnished with each product and to heed precautionary statements concerning hazards to life and property as well as to follow manufacturers' use instructions to obtain optimum product performance.

It is suggested that purchasing agents specify, when ordering listed products, that the products meet the minimum standards as adopted by the Institutional Research Council, Inc. and that they request an express warranty that the product does indeed meet these standards; this warranty to be typed or stamped on the face of the invoice when submitted for payment. The wording might be as follows:

> The items invoiced above are expressly warranted to meet the standards adopted by the Institutional Research Council, Inc. published in the 1965-1966 Workbook of Test Methods and Standards for the Certified Products Program of the Institutional Research Council, Inc.*

This **1965 Certified Products List,** printed and distributed by the Institutional Research Council, Inc., supersedes all previous product lists and will be valid through February 28, 1966.

*The 1965-1966 Workbook of Test Methods and Standards is available from The Institutional Research Council, Inc., 221 West 57th Street, New York, N. Y. 10019. Price: IRC Members $3.75. Nonmembers $7.50. Individual specifications 50¢ each.

(A) ABRASIVE CLEANERS

The decrease in gloss produced on a standard glass plate due to the abrasiveness of any product shall not be greater than 60 per cent. The degree of abrasiveness shall be classified according to the per cent decrease in specular gloss produced on a standard glass plate (Abrasion tests conducted with a PEI Tester). The pH of a 1 per cent by weight dispersion of the product in distilled water shall be between 5.0 and 11.5. The cleaner shall remove metallic stains from porcelain at least as quickly as the comparison standard and shall leave no residue after rinsing from the cleaned surface.

For further details refer to IRC Specification 1.1.

Mild Degree of Abrasiveness

PRODUCT and TYPE	MANUFACTURER
Horizon S&S Twin (Paste)	Horizon Cleaner Products, Inc.

Moderate Degree of Abrasiveness

PRODUCT and TYPE	MANUFACTURER
Alpha Tile Flash (Liquid)	Alpha Chemical Co.
****Cen-Tex** (Paste)	Center Chemical Co.
***Cento Bactericidal Creme Cleanser** (Liquid)	Center Chemical Co.
****Institutional Bab-O** (Powder)	B. T. Babbitt, Inc.
N-L Creme Cleanser (Liquid)	National Laboratories Div. Lehn & Fink Products Corp.
****Pal-lo Foaming Cleanser** (Powder)	Pal Products Mfg. Corp.
****Porcelain Cleaner** (Powder)	Hillyard Chemical Co.
***Sanfax Germicidal Creme Cleanser** (Liquid)	Sanfax Corp.
****Sanfax Tex-50** (Paste)	Sanfax Corp.
Temp (Paste)	Du Bois Chemicals, Inc.
****Temp** (Powder)	Du Bois Chemicals, Inc.

*Satisfactory for listing as an anti-bacterial compound.
**Exhibits bleaching action.

(B) ANTI-BACTERIAL COMPOUNDS

The United States Department of Agriculture requires the registration of certain anti-microbial chemicals for movement in interstate commerce under a Federal law regulating sale of "economic poisons." The law requires that the labels of all economic poisons bear net content and ingredient statements in prescribed forms, necessary caution and warning statements, adequate directions for use, and name and address of the manufacturer or distributor. Directions for use must be sufficient, if followed, to enable the purchaser to obtain the anti-microbial results promised.

Based on information received from the manufacturer and an examination of the product literature, it is our opinion that the products listed below are properly labeled, as regards anti-bacterial effectiveness.

Anti-Bacterial Compounds—*Continued*

If the product has also been found acceptable to IRC for functions other than anti-bacterial action, it is included in the appropriate cleaning and maintenance category.

The type of claimed anti-bacterial action is shown by the following code:

CODE and EXAMPLES	DEFINITION
(BC)—Disinfectant, Bactericide, Germicide	Kills all bacteria except resistant spore-forming species
(FC)—Fungicide	Kills all fungi
(BS)—Bacteriostat	Inhibits the growth of bacteria
(FS)—Fungistat	Inhibits the growth of fungi
(S)—Sanitizer	Reduces bacterial counts to safe public health levels

Anti-Bacterial Compounds

PRODUCT and TYPE	MANUFACTURER
#92-L Terg-o-cide (BC)	The State Chemical Manufacturing Co.
Amway Germicidal Concentrate (BC)	Amway Corp.
Bio Met 11 (BC, FC)	M & T Chemicals, Inc.
Bol-Tabs (BC)	Horizon Industries
Cento Bactericidal Creme Cleanser (FC)	Center Chemical Co.
Cento Dust-Nil Anti-Bacterial Mop Treatment (FS)	Center Chemical Co.
Cento Hi-Septic Bactericidal Lavatory System Cleaner (BC, FC)	Center Chemical Co.
Cento Phenocide Bactericidal Detergent (BC, FC)	Center Chemical Co.
Cento Tuff-Kote Floor Seal & Finish (FS)	Center Chemical Co.
Clean-O-Lite (BC)	Hillyard Chemical Co.
Columbia Cleanicide Germicidal Cleaner Concentrate (BC, FC)	Columbia Products–U. S. Borax
Columbia Col-X Ready To Use Bacteriostatic Dust Control Treatment (BS)	Columbia Products–U. S. Borax
Columbia HetraCIDE Germicide Concentrate (BC, FC)	Columbia Products–U. S. Borax

Sanfax Durable Floor Seal & Finish (FS) Sanfax Corp.
Sanfax Germicidal Creme Cleanser (FC) Sanfax Corp.
Sanfax Micro-Phene Biocidal Detergent (BC, FC) Sanfax Corp.
Sani-Bactol (BS, FS, S) Parachlor Chemical Corp.
Sani-Dril (BC) Davis & Geck Div., American Cyanamid Co.
Sterile Disinfectant/Cleaner (BC) Advance Chemical Co.
Super So-Kleen (BC) B. T. Babbitt, Inc.

(C) BOWL AND PORCELAIN CLEANERS
Abrasive and Nonabrasive Types

The abrasive type shall readily remove rust and metallic stains from porcelain. The nonabrasive type shall readily remove rust stains from porcelain. The cleaner shall not be excessively corrosive to steel, brass, or cast iron, and shall not etch porcelain. The abrasive type shall not show a decrease in specular gloss greater than 60% on a standard glass plate. (Test conducted with a PEI Tester)

For further details refer to IRC Specification 1.2.

PRODUCT and TYPE	MANUFACTURER
Bol-Boy (Nonabrasive; Liquid)	Du Bois Chemicals, Inc.
***Bol-Tabs** (Nonabrasive; Tablet)	Horizon Industries
Bowl Cleanse (Nonabrasive; Liquid)	Economics Laboratory, Inc.
***Cento Hi-Septic Bactericidal Lavatory System Cleaner** (Nonabrasive; Liquid)	Center Chemical Co.
Lightnin' Liquid Toilet Bowl Cleaner (Nonabrasive; Liquid)	B. T. Babbitt, Inc.
S-M (September-Morn) Bowl Cleaner (Nonabrasive; Liquid)	Atlantic Chemicals, Inc.
***Sanfax d'germ Biocidal Toilet System Cleaner** (Nonabrasive; Liquid)	Sanfax Corp.
Vani-Sol (Nonabrasive; Liquid)	National Laboratories Div. Lehn & Fink Products Corp.

*Satisfactory for listing as an anti-bacterial compound.

(D) CARPET AND RUG CLEANERS

The degree of soil removal accomplished by any product shall be at least equal to the comparison standard. Resoiling of the cleaned carpet shall be no greater than that produced by the comparison standard. The solids content of the product shall be determined as a matter of information only.

Carpet and Rug Cleaners—*Continued*

When diluted as recommended by the manufacturer, the cleaner shall cause no greater degree of running or leaching of the colors on a multicolored, cotton and rayon-blended rug yarn than the comparison standard. When diluted as directed by the manufacturer, the pH of the product shall be no greater than 10.5. The presence or absence of an optical brightener, as well as the fibers to which any brightener present is substantive, shall be determined as a matter of information only.

For further details refer to IRC Specification 1.3.

Shampoo Type—Applied by Rotary Brush Machine

PRODUCT and TYPE	MANUFACTURER
40-1 Soapless Base Rug, Carpet & Upholstery Shampoo (Liquid)	American-Lincoln Corp.
Advance Arid Foam Carpet Shampoo (Liquid)	Advance Floor Machine Co.
All Brite Rug & Upholstery Shampoo (Liquid)	All Brite Sales Co.
Amway Rug & Upholstery Shampoo (Liquid)	Amway Corp.
Artloom Carpet Shampoo (Liquid)	Duo-Dellay Products Co.
Cadet Carpet Cleaner (Liquid)	U. S. Sanitary Specialties Corp.
Cento Dri-Foam Rug and Upholstery Shampoo (Liquid)	Center Chemical Co.
Coastal Hi Tex (Liquid)	Coastal Chemical Corp.
Coastal Rug Tex (Liquid)	Coastal Chemical Corp.
Columbia Crown Rug & Upholstery Shampoo Concentrate (Liquid)	Columbia Products–U. S. Borax
Columbia Premium Rug & Upholstery Shampoo Soap Concentrate (Liquid)	Columbia Products–U. S. Borax
Columbia Rug & Upholstery Shampoo (Liquid)	Columbia Products–U. S. Borax
Duo-Dellay (Liquid)	Duo-Dellay Products Co.
Foamy (Liquid)	Supreme Industries
Glad-Eze Super Special Carpet & Upholstery Shampoo (Liquid)	Glad-Eze Products Corp.
Glamorene Rug Shampoo (Liquid)	Glamorene, Inc.
Hilton Hotels Rug & Upholstery Cleaner (Liquid)	Statler-Hilton Studios
Hilton Hotels Soil Resistant Rug & Upholstery Cleaner (Liquid)	Statler-Hilton Studios
Lawton Bros. Rug & Upholstery Shampoo (Liquid)	Lawton Brothers
Lovinger Rug & Upholstery Shampoo (Liquid)	Lovinger Company
Mark Rug & Upholstery Shampoo (Liquid)	Mark Supply Co.
MOM'S Rug & Upholstery Shampoo (Liquid)	MOM Chemical Co., Inc.
Petersen & Moore Rug & Upholstery Shampoo (Liquid)	Petersen & Moore
Re-Juvenate Rug & Upholstery Shampoo (Liquid)	Bryn Mawr Products Co.
Richco Rug & Upholstery Shampoo (Liquid)	Richco Products, Inc.
Rug and Upholstery Shampoo—Soapless (Liquid)	Aero Chemical Corp.
Rug & Upholstery Shampoo—Soapless (Liquid)	The Haag Laboratories, Inc.
Rug-It "L" (Liquid)	Certified Chemical & Equipment Co.
Sanfax Ultra-Foam Rug & Upholstery Shampoo (Liquid)	Sanfax Corp.
SRU Synthetic Rug & Upholstery Shampoo (Liquid)	A. J. Lehrman & Sons
SSS Rug & Upholstery Shampoo (Liquid)	Standardized Sanitation Systems, Inc.
Tex-All "B" (Liquid)	Certified Chemical & Equipment Co.
Top Rug & Upholstery Shampoo (Liquid)	Top Products, Inc.
Trico Rug & Upholstery Shampoo (Liquid)	Trico Equipment Co.

Powder Type—Contains Inert Adsorbent

PRODUCT and TYPE	MANUFACTURER
Dri-Way Compound (Powder)	Certified Chemical & Equipment Co.
Glamorene Dry Cleaner (Powder)	Glamorene, Inc.
Host Dry Cleaner (Powder)	Racine Industrial Plant, Inc.
Racine Dry Cleaner (Powder)	Racine Industrial Plant, Inc.

Emulsion Type—Applied by Mop

This is a new category of products about which there is limited laboratory and field experience. Read manufacturers' use instructions carefully for special directions concerning the method of application.

PRODUCT and TYPE	MANUFACTURER
Alladin Carpet Cleaner (Liquid)	Top Products, Inc.

(E) DISHWASHING COMPOUNDS—MACHINE

The pH of a 0.37% by weight solution of the product in distilled water shall be no greater than 12.5. When a standard quantity of acid is added to a 0.37% by weight solution of the product, the pH shall not be less than 9.0. Using the manufacturer's recommended concentration, the product shall be classified in

Dishwashing Compounds—Machine—*Continued*

accordance with its ability to soften 3-, 7-, & 15-grain hard water. Unless the product is specifically exempted by the manufacturer from use on aluminum, it shall not cause discoloration, etching, or the formation of a white surface film on an aluminum surface. The weight loss produced by the diluted product in contact with standard aluminum specimens shall be determined and reported as a matter of information only.

For further details refer to IRC Specification 1.4.1.

For Soft Water Use

PRODUCT and TYPE	MANUFACTURER
***Combat** (Powder)	Du Bois Chemicals, Inc.
KOL #2 (Powder)	Du Bois Chemicals, Inc.
***Soilite** (Powder)	Economics Laboratory, Inc.

For Moderately Hard Water Use

PRODUCT and TYPE	MANUFACTURER
***Acclaim** (Powder)	Economics Laboratory, Inc.
Amway Automatic Dishwashing Compound (Powder)	Amway Corp.
***Appeal** (Powder)	The Diversey Corp.

***Event** (Powder)	Economics Laboratory, Inc.
***Impact** (Powder)	Economics Laboratory, Inc.
***Mir-A-Klor X** (Powder)	Du Bois Chemicals, Inc.
***Perform** (Powder)	Du Bois Chemicals, Inc.

*Manufacturer either rules out use on aluminum or suggests precautions to be taken.

(F) DISHWASHING COMPOUNDS—MANUAL

The pH of a solution of the compound, prepared in accordance with the manufacturer's recommendation, shall not be greater than 10.5. The minimum detergency end point of a 0.1% by weight solution of the compound shall be 5 when adjusted for comparison with the control solution. The number of soiled dishes washed at the foam end point shall be determined as a matter of information only. Unless the compound is specifically exempted by the manufacturer from use on aluminum, it shall not cause discoloration, etching, or the formation of a white film on an aluminum surface. The weight loss produced by the diluted product in contact with standard aluminum specimens shall be determined and reported as a matter of information only.

For further details refer to IRC Specification 1.4.2.

PRODUCT and TYPE	MANUFACTURER
Amway Dish Drops (Liquid)	Amway Corp.
Cento 610 (Powder)	Center Chemical Co.
Cento Blue Censation (Powder)	Center Chemical Co.
Cento Disheen (Liquid)	Center Chemical Co.
Cento Super Pot & Pan Cleaner (Powder)	Center Chemical Co.
D-Lite (Powder)	Du Bois Chemicals, Inc.
Du-Fome (Liquid)	Du Bois Chemicals, Inc.
Du-Pan (Powder)	Du Bois Chemicals, Inc.
Express (Liquid)	Economics Laboratory, Inc.
Glim Lotion Dishwashing Detergent (Liquid)	B. T. Babbitt, Inc.
Key (Liquid)	The Diversey Corp.

Sanfax Sparkle (Powder)	Sanfax Corp.
San-O-Gleem (Liquid)	Sanfax Corp.
Tetrox (Powder)	Economics Laboratory, Inc.
Tower (Powder)	The Diversey Corp.

(G) FLOOR CLEANERS

The presence or absence of an identifiable perfume odor shall be noted as a matter of information only. At the recommended use dilution, the cleaner shall not soften or crack vinyl, rubber and asphalt tiles, or linoleum to a greater degree than the comparison standard. At the manufacturer's recommended use dilution, the product shall display a cleaning efficiency on naturally soiled linoleum at least equal to the comparison standard. The pH of a 1% by weight solution of the cleaner shall not be less than 5.5 nor more than 11.5. A solution of the cleaner, prepared according to the manufacturer's recommendation and in 10-grain hard water, shall leave no more residue after rinsing than that left by the hard water comparison control. Liquid products shall be completely soluble in warm water in less than one minute when manually agitated. Powdered products shall be completely soluble in warm water in less than 5 minutes when manually agitated.

Floor Cleaners—*Continued*

For further details refer to IRC Specification 1.5.

PRODUCT and TYPE	MANUFACTURER
Binzel 120 (Powder)	Binzel Products, Inc.
***GSC** (Liquid)	Du Bois Chemicals, Inc.
General Purpose Concentrate (Liquid)	American-Lincoln Corp.

Oakite 202 (Liquid)	Oakite Products, Inc.
Syn Base 9-1 (Liquid)	The Haag Laboratories, Inc.
Syn-Con Cleaner (Liquid)	Chemical Corp. of America
Vac-Eze (Liquid)	Du Bois Chemicals, Inc.

*Satisfactory for listing as an anti-bacterial compound.

(H) FLOOR POLISHES

The solids content of the product shall be determined as a matter of information only. The product shall show no creaming or gelling under the prescribed stability test requirements. Water-spotting tests shall show no whitening after 24 hours. The dried film shall show no appreciable discoloration. The floor polish shall be completely removable with an alkaline soap solution unless the manufacturer specifies a particular compound to effect complete film removal. The polish shall be capable of complete removability in 200 strokes of the Gardner Washability Tester. On asphalt tile and on vinyl asbestos tile, the wax shall show a minimum bright-dry gloss of 28 on the Gardner Glossmeter. The buffed gloss shall be reported as a matter of information only. The polish shall not streak or puddle, and shall show no more than slight whitening when tested for dusting or powdering properties. Under floor service conditions, the polish shall be at least equal on a comparison basis to standard materials.

For further details refer to IRC Specification 3.4.

(I) FURNITURE POLISHES

The polish shall have a non-objectionable odor. The polish shall pour, spread, and buff on a finished mahogany veneer surface at least as easily as the comparison standard. When applied as directed by the manufacturer, the polish shall produce an increase in the 60° specular gloss measurement at least equal to that produced by the comparison control. A standard test surface polished with the product shall attract no more dust due to the development of a static charge than a similar surface polished with the comparison material. A surface polished with the product shall show no more tendency to mar and scuff than a similar surface polished with the comparison material. The decrease in the specular gloss reading obtained 24 hours after polishing a surface with the product shall be no greater than that occurring on a similar surface polished with the comparison material. The flammability of the polish shall be in accordance with label claims. A freshly polished mahogany veneer surface shall not be permanently stained by exposure to small amounts of an alcohol-water mixture.

For further details refer to IRC Specification 1.6.

Columbia Col-glo Furniture Wax (Liquid)	Columbia Products—U. S. Borax
Vita Lustre (Liquid)	Vita Lustre

(J) GENERAL PURPOSE CLEANERS

The presence or absence of an identifiable perfume odor shall be noted as a matter of information. A solution of the cleaner shall cause no greater decrease in gloss on a painted surface than a 0.2% solution of trisodium phosphate. A solution of the cleaner shall not crack, swell, or soften vinyl-asbestos, vinyl, rubber and asphalt tile, or linoleum to a greater degree than the comparison standard. A solution of the cleaner shall not attack, discolor, or etch brass, copper, steel, cast iron, aluminum, or tinned iron metals.

The pH of a 1% by weight solution of the cleaner shall not be less than 5.5 nor more than 11.5. A solution of the cleaner, prepared according to the manufacturer's use recommendation and in 10-grain hard water, shall leave no more residue after rinsing than that left by a hard water comparison control. Liquid products shall be completely soluble in warm water in less than one minute when manually agitated. Powdered products shall be completely soluble in warm water in less than 5 minutes when manually agitated.

At the manufacturer's recommended dilution, the cleaner shall remove pencil and crayon lines at least as effectively as the comparison standard. The ability of the cleaner to remove a synthetic laboratory soil shall be determined as a matter of information only.

For further details refer to IRC Specification 1.19.

(K) GLASS CLEANERS

When used to clean a soiled window pane, the cleaner shall remove at least as much soil as and show no more streaking than the comparison standard. The cleaner shall cause no more visible damage to an aluminum or painted surface than the comparison standard. The flammability of the cleaner shall be in accordance with label claims. A window pane cleaned with the product shall evidence no greater soil redeposition than a similar pane cleaned with the comparison standard.

For further details refer to IRC Specification 1.10.

PRODUCT and TYPE	MANUFACTURER
Horizon C & P Twin (Liquid)	Horizon Cleaner Products, Inc.
Windo-Clean (Liquid)	Hillyard Chemical Co.

(L) METAL POLISHES

The product shall not have an objectionable odor. It shall completely and easily remove tarnish from soiled brass without being excessively abrasive. The product shall not be difficult to apply or remove after drying. The abrasive shall be easily dispersed after being subjected to an accelerated force of gravity.

For further details refer to IRC Specification 1.9.

PRODUCT and TYPE	MANUFACTURER
Liberty Polish, The Perfect Metal Cleaner (Liquid)	Scranton Chemical Co.

(M) MOP TREATING COMPOUNDS

The compound shall show no tendency to spontaneously heat when tested, using the Mackey apparatus. Asphalt tile in contact for 24 hours with mop strings treated with the compound shall show no evidence of softening, swelling, cracking, or bleeding. Mop strings treated with the compound shall show an average synthetic dirt pick-up of not less than 22%.

For further details refer to IRC Specification 1.21.

*Satisfactory for listing as an anti-bacterial compound.

(N) PAINTS

Interior Flat Paints

A number of institutional grade, alkyd-type, flat wall paints were evaluated for conformance to a modified version of the 1963-64 IRC Specification 3.5.1.

The paints included in the program were believed to be of common interest to the majority of the Institutional Research Council, Inc. member associations.

The prerequisites for inclusion in the study were that the product should be
1) an alkyd-type, flat wall paint;
2) sold for institutional use;
3) nationally distributed and nationally advertised;
4) available at retail under the manufacturer's own label.

A list of potentially acceptable brand-name products was compiled from a survey of leading paint manufacturers. Each firm was asked to furnish the name of a product that met all the stipulated conditions. A follow-up mailing was made to manufacturers who did not reply to the initial survey.

It is possible that some paints which would have qualified were unintentionally overlooked in the survey or that some manufacturers elected not to reply. Such omissions should be called to the attention of the Council to insure inclusion of the paint in possible future programs.

A one gallon sample of each product was purchased at retail by the official testing laboratory for use in this program.

Manufacturers of paints tested for the 1964 list were asked to certify that no change had been made in composition since the date of test. Paints of manufacturers that submitted such certification were included in the 1965 list. Follow-up mailings were made to manufacturers who did not reply to the request for proof.

The requirements of IRC Specification 3.5.1 were set high to insure satisfactory overall performance in application, appearance and durability characteristics.

Only those products which met all the requirements of the specification were deemed acceptable for listing. Those which failed to qualify have been omitted. A summary of the specification is given in Table I.

TABLE I

IRC Specification 3.5.1; Modified. PAINT, INTERIOR, FLAT (1964-65).

TEST	REQUIREMENT
Condition in container	Not thickened, skinned, or badly caked. Must be readily redispersed.
Dry Hard Time	16 hours maximum.
Hiding Power	Contrast ratio 0.900 minimum at 2.5 mils wet-film thickness.
Leveling	No running or sagging. No severe lapping or brush marks.

Paints—*Continued*

IRC Specification 3.5.1; Modified. PAINT, INTERIOR, FLAT (1964-65).

TEST	REQUIREMENT
Brushability	Shall brush easily.
Odor, brushed-out paint film	No objectionable odor when wet; no residual odor when dry.
Skinning	None in 48 hours.
Flexibility	No cracks on bending over ½" mandrel.
Gloss	15 maximum.
Yellowing	0.15 maximum.
Scrub resistance	No definite breaks or detachment of film down to undercoat after 1,000 cycles. A few small pin-point-sized areas shall be disregarded.
Stain removal	Substantial removal of pencil, crayon, ink, lipstick, and butter after 200 cycles; gloss shall not be more than 150% of the original value before washing.
Absorption	¾" in 3 hours.
Grind	Not less than 3.

Interior Flat Paints

PRODUCT and TYPE	MANUFACTURER
Mellotone Alkyd Flat (Alkyd)	The Lowe Brothers Co.
One-Coat Velour Flat Wall Enamel (Alkyd)	Devoe & Raynolds Co., Inc.
Sani-Flat Alkyd White #204-0 (Alkyd)	Benjamin Moore & Co.
Speed-Hide Alkyd Flat White (Alkyd)	Pittsburgh Plate Glass Co.
Valspar Velvet Alkyd Flat Enamel (Alkyd)	The Valspar Corp.

(O) SILVER POLISHES, ABRASIVE, AND DIP TYPE

The polish shall have a non-objectionable odor. The pH of the polish shall be recorded for information only. The polish shall remove at least as much tarnish from a sterling silver panel as the comparison standard. A standard sterling silver panel shall not decrease in weight by more than 10 mg. per 100 strokes due to the action of any abrasive present in the polish. The polish shall contain no cyanide. The flammability of the product shall be in accordance with label claims.

For further details refer to IRC Specification 1.15.

PRODUCT and TYPE	MANUFACTURER
Wright's Silver Polish (Paste)	J. A. Wright & Co.

(P) WAX STRIPPERS

The presence or absence of an identifiable perfume odor shall be noted as a matter of information. At the recommended use dilution, the cleaner shall not soften or crack vinyl, rubber and asphalt tile, or linoleum to a greater degree than the comparison standard. The pH of a 1% by weight solution of the cleaner shall not be less than 5.5 nor greater than 11.5. A solution of the cleaner, prepared according to the manufacturer's recommendation and in 10-grain hard water, shall leave no more residue after rinsing than that left by the hard water comparison control. Liquid products shall be completely soluble in warm water in less than one minute when manually agitated. Powdered products shall be completely soluble in warm water in less than 5 minutes when manually agitated. Complete removal of a wax film shall be accomplished in a maximum of 200 oscillations of the Gardner Washability Tester.

For further details refer to IRC Specification 1.18.

Part II

INSTITUTIONAL TEXTILES

The textile products listed in Part II have been tested for their manufacturer and/or supplier and have been certified by them as complying with all the requirements of the 1963 revised American Standard L24, the nationally recognized standard relating to the quality of textiles sold for use in hospitals, hotels, motels, schools and other institutions. Although test reports were required for each item to be listed, the choice of the laboratory was left to the discretion of the manufacturer or supplier applying for listing.

Manufacturers were encouraged to file test reports and affidavits certifying as many products as would meet the requirements. However, with the tremendous variety of merchandise involved, very few were able to test and certify everything in their lines.

It is suggested that purchasing agents specify when ordering listed products that the product meet the appropriate American Standard L24 and that they request an express warranty that the product does indeed meet these standards; this warranty to be typed or stamped on the face of the invoice when submitted for payment. The wording might be as follows:

> The items invoiced above are expressly warranted to meet all the requirements of the appropriate American Standard L24 for Institutional Textiles published by the American Standards Association.*

This 1965 List of textiles tested for conformance with the minimum performance requirements of American Standard L24 will be valid through February 28, 1966.

*Copies of the L24 Standards are available from the American Standards Association, Inc., 10 East 40th St., New York, N. Y. 10016, price $10.00 complete set. Contact American Standards Association for prices on individual standards.

AWNINGS AND CANOPIES

Part III

COMMERCIAL CARPETS

Durability and service quality depend to a large degree on the pile density of a carpet. This, in turn, is largely determined by two factors: weight of yarn in the pile and height of pile.

Since both of these factors can be evaluated by analysis—total weight of pile yarn as ounces per square yard of carpet, and pile height as thousandths of an inch—it is possible to set up specification requirements which, if met, will result in adequate levels of pile density.

In developing the minimum requirements of this specification, a round-wire, all-wool velvet carpet was used as the reference level of performance, under commercial conditions of average heavy traffic. The density factors were set on the basis of ounce-weight and pile height for this type of carpeting.

The required minimum ounce weights of pile yarn are given for wool, acrylics and nylon. The recommended ounce-weight of other fibers that will produce equivalent durability has yet to be accurately established by service life experience. When this information becomes available, the listings will include commercial carpets based on synthetic pile fibers.

It is known that carpets based on nylon do not require the same ounce-weights of pile yarn as wool carpets. For equal wear, it appeared possible to reduce the weight of nylon pile by 20% of the recommended wool weights given in the specification.

Experience gained thus far with acrylics and modacrylics indicates that these materials should be used at the same ounce weights of pile yarn as for wool.

Requirements are presented for two levels of traffic conditions, illustrating the necessary variation in pile yarn weight and pile height for AVERAGE HEAVY TRAFFIC and AVERAGE MEDIUM TRAFFIC.

The specification takes into account the differences in service quality attributable to carpet construction. Grade limits are set according to the method of carpet manufacture. It is believed that the minimum requirements for other construction types give durability qualities comparable to the round-wire velvet used as the reference level of performance.

The specification requirements will assure satisfactory service life, **provided** that the carpet construction conforms to accepted commercial practice and the materials of construction are of good quality.

Foot-traffic conditions will vary with the type, size, and location of the commercial area involved. Generally, the type and location of the commercial area will determine whether it will be subjected to HEAVY or MEDIUM traffic. For example, the lobbies, public rooms, corridors, and stairways in a hotel will normally receive heavy traffic. But the hotel guest rooms usually encounter medium traffic. Also, a large department store will have heavy traffic conditions throughout the aisles and selling areas, but a small shop selling women's apparel will, very likely, get medium traffic.

APPLICATIONS	AVERAGE HEAVY TRAFFIC	AVERAGE MEDIUM TRAFFIC
Office Buildings	Reception areas, aisles, open work areas, stairways, and elevators	Executive offices
Banks Stores	Entranceways, lobbies, stairways, elevators, aisles, and selling areas*	Executive offices, semi-private office areas, aisles, and selling areas*
Churches Funeral Homes	——	Entranceways, stairways, aisles, areas under seats or benches, chapel & altar
Restaurant/ Clubs	Dining areas, bars, and grill	——
Schools	Corridors, classrooms, libraries and stairways	Administrative offices, faculty lounges
Transportation: Planes, trains, railroads, ships	Aisles, dining areas, and lounges	Staterooms and compartments
Hotels, Motels, Hospitals, Libraries	Lobbies, stairways, elevators, corridors, public rooms, meeting and banquet rooms, wards	Guest rooms, executive offices, staff lounges, private rooms, and waiting rooms
Professional offices	——	Reception areas and consultation rooms of doctors, dentists, lawyers, etc.
Theatres, Bowling alleys	Lobbies, stairways, lounges, and aisles	——

*Dependent on size and volume of customers.

There are other carpetable commercial areas not included in the list above. Consultation with commercial carpet specialists will help determine the traffic conditions based on experience with similar types and sizes of commercial areas.

It should be noted that the commercial carpet recommendations given here are MINIMUM specifications for AVERAGE heavy and medium foot traffic conditions. However, traffic conditions in some commercial areas are often substantially higher than the average. As a result, they demand carpets with yarn weight requirements higher than the minimums specified for normal heavy traffic use and luxurious effect.

For example, large motion picture theatres and department stores in major metropolitan centers use carpets containing as much as 70 to 90 ounces of pile yarn per square yard because of the extra heavy traffic they encounter.

It is not unusual for theatres, stores, offices, and other commercial areas subjected to HEAVIER-THAN-AVERAGE traffic to use carpets with 50 to 60 ounces of pile yarn per square yard.

Consultations with commercial carpet specialists can help determine whether a particular commercial area would require carpeting with specifications above the yarn weights recommended for average heavy traffic conditions.

The minimum requirements for weight of pile yarn per square yard of carpet and pile height for woven, tufted, and knitted carpets are given in Table I.

The manufacturer has submitted suitable certification that his carpet conforms to the requirements in Table I.

The carpets are listed alphabetically by trade name, according to the suggested traffic level (heavy or average) as determined by conformance to pile density requirements for each type of construction.

Table I

MINIMUM REQUIREMENTS BASED ON PILE DENSITY

	AVERAGE HEAVY TRAFFIC*			AVERAGE MEDIUM TRAFFIC*		
CARPET	Minimum Weight per sq. yd. (ounces) Wool & Acrylic-Modacrylic	Nylon	Maximum Average Pile height (inches)	Minimum Weight per sq. yd. (ounces) Wool & Acrylic-Modacrylic	Nylon	Maximum Average Pile height (inches)
Axminster	36	29	0.200—0.310	28	22½	0.200—0.310

A NOTE TO MEMBERS OF THE AMERICAN LIBRARY ASSOCIATION

One of the objectives of ALA'S Library Technology Project is to provide librarians with information which will enable them to purchase supplies and equipment with the assurance that such products meet a basic standard of quality.

This publication lists products which have been certified by the manufacturers to meet the standards established by the Institutional Research Council, Inc. It is made available by the American Library Association for the use of librarians with responsibility for the selection and purchases of supplies and equipment within the areas of its coverage.
